

CANADIAN SATELLITE TRACKING AND ORBIT RESEARCH

60 BUELL ST. SUITE #2
BROCKVILLE ONTARIO, CANADA K6V 4Y3

Dear Satellite Industry Member,

I am proud to introduce Canadian Satellite Tracking and Orbit Research (CASTOR). CASTOR was founded to conduct satellite surveys, perform professional satellite tracking and educate the public about our dynamic and vital satellite population.

CASTOR was founded upon my many years of satellite tracking experience and today it is dedicated to optical satellite tracking research and development.

CASTOR is committed to providing inexpensive, reliable and accurate methods of tracking satellites by utilizing professional optical telescopes and research-grade CCD detectors.

CASTOR currently offers the following services:

- Optical tracking for satellites 300 km to 40,000 km in altitude;
- Tracking data accurate to within 10 arc-seconds (under 1 km for a geostationary satellite);
- Satellite tracking facility project management (requirements, design, construction, training and operation);
- Emergency satellite tracking; and
- Consulting.

For more information, you are invited to visit www.castor2.ca or contact CASTOR at info@castor2.ca.

Sincerely,

Michael A. Earl
